

Name _____

Date _____

1. There were 5 boys at Jake's party. Some more came after basketball practice. Then, there were 9. How many boys came to Jake's party after basketball practice?
 - a. Draw a picture to help you solve the problem.

- b. Draw a complete number bond that goes with this story.

- c. Write an addition sentence to match this story.

2. Write the numbers that go in the blanks.

- Color all of the partners to 10 blue.
- Color all of the +1 facts yellow.
- Color all of the +2 facts red.

$$3 + 7 = \underline{\quad}$$

$$\underline{\quad} = 1 + 4$$

$$3 + 2 = \underline{\quad}$$

$$\underline{\quad} = 7 + 2$$

$$5 + 1 = \underline{\quad}$$

$$\underline{\quad} = 8 + 1$$

$$9 + 1 = \underline{\quad}$$

$$\underline{\quad} = 2 + 6$$

$$6 + 4 = \underline{\quad}$$

3. Look at the party picture!

- Write at least two different addition sentences using 3, 6, and 9 that describe the party picture.

- How are these number sentences the same? Explain using pictures and numbers.

4. Monica says that when the unknown is 4, it makes this number sentence true: $5 + 3 = \underline{\quad} + 4$. Terry says she is wrong. He says 8 makes the number sentence true.
- a. Who is correct? Explain your thinking using pictures, words, or numbers.
- b. Monica says that 3 and 5 is equal to 5 and 3. Terry says she is wrong again. Explain who is correct, using pictures, numbers, or words.
- c. Next, Monica tells Terry $8 = 8$. Terry says she is wrong one more time. Explain who is correct, using pictures, numbers, or words.
- d. Terry decided to give 8 carrot sticks to his friend Monica. Monica put 5 carrot sticks on her plate and some more in her lunch box. How many carrot sticks did Monica put in her lunch box?

Mid-Module Assessment Task
Standards Addressed

Topics A-F

Number and Operations**The student is expected to:**

- 1.3B** use objects and pictorial models to solve word problems involving joining, separating, and comparing sets within 20 and unknowns as any one of the terms in the problem such as $2 + 4 = []$; $3 + [] = 7$; and $5 = [] - 3$;
- 1.3D** apply basic fact strategies to add and subtract within 20, including making 10 and decomposing a number leading to a 10;
- 1.3E** explain strategies used to solve addition and subtraction problems up to 20 using spoken words, objects, pictorial models, and number sentences;
- 1.3F** generate and solve problem situations when given a number sentence involving addition or subtraction of numbers within 20.

Algebraic Reasoning**The student is expected to:**

- 1.5D** represent word problems involving addition and subtraction of whole numbers up to 20 using concrete and pictorial models and number sentences;
- 1.5E** understand that the equal sign represents a relationship where expressions on each side of the equal sign represent the same value(s);
- 1.5F** determine the unknown whole number in an addition or subtraction equation when the unknown may be any one of the three or four terms in the equation;
- 1.5G** apply properties of operations to add and subtract two or three numbers.

Evaluating Student Learning Outcomes

A Progression Toward Mastery is provided to describe steps that illuminate the gradually increasing understandings that students develop *on their way to proficiency*. In this chart, this progress is presented from left (Step 1) to right (Step 4). The learning goal for students is to achieve Step 4 mastery. These steps are meant to help teachers and students identify and celebrate what the students CAN do now and what they need to work on next.

A Progression Toward Mastery

Assessment Task Item	STEP 1 Little evidence of reasoning without a correct answer. (1 Point)	STEP 2 Evidence of some reasoning without a correct answer. (2 Points)	STEP 3 Evidence of some reasoning with a correct answer or evidence of solid reasoning with an incorrect answer. (3 Points)	STEP 4 Evidence of solid reasoning with a correct answer. (4 Points)
<p>1</p> <p>1.3B 1.3D 1.5D 1.5F</p>	<p>The student is unable to represent the problem with pictures or is disorganized with the symbols, digits, and structure and writes an inaccurate number bond and number sentence.</p>	<p>The student draws an incorrect picture with an equation and number bond that may or may not match the incorrect picture.</p>	<p>The student draws and solves the <i>add to with change unknown</i> problem correctly (4 more boys came to the party) but is unable to write an addition equation or number bond to match the problem.</p> <p>OR</p> <p>The student writes an equation and number bond (using 9, 5, and 4) but cannot explain his thinking using pictures to solve the <i>add to with change unknown</i> problem.</p>	<p>The student correctly</p> <ul style="list-style-type: none"> Draws a picture to solve the <i>add to with change unknown</i> problem and determines that 4 more boys came to the party. Makes a number bond with 9, 5, and 4. Writes an addition equation ($9 = 5 + \underline{\quad}$, $5 + \underline{\quad} = 9$, etc.).
<p>2</p> <p>1.3D 1.3E 1.3F 1.5G</p>	<p>The student is unable to add as evidenced by unanswered problems.</p> <p>The student colors boxes at random with little understanding of partners to 10, +1, and +2.</p>	<p>The student makes several calculation or category coloring errors.</p> <p>The student makes no accommodation for $9 + 1$.</p>	<p>The student answers most addition problems correctly and makes some category coloring errors (up to two calculation or color errors combined.)</p> <p>The student makes no accommodation for $9 + 1$ or makes an accommodation for $9 + 1$ with calculation or category coloring errors.</p>	<p>The student correctly</p> <ul style="list-style-type: none"> Answers all addition problems. Colors all equations in accordance to the problem type categories. Makes an accommodation for $9 + 1$ as it fits two categories.

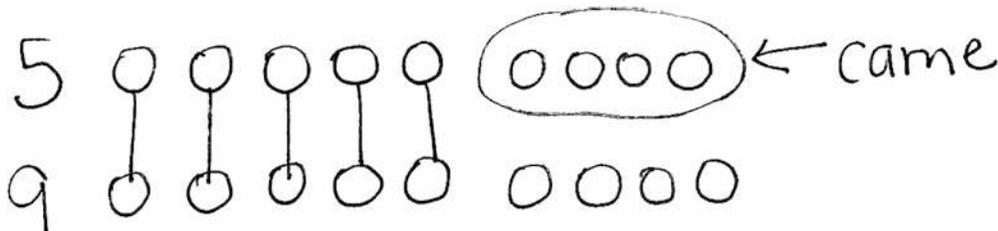

A Progression Toward Mastery

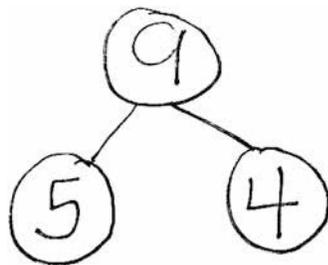

<p>3</p> <p>1.3C 1.3D 1.3E 1.3F 1.5G</p>	<p>The student writes two incorrect number sentences.</p> <p>OR</p> <p>The student is disorganized with the symbols, digits, and structure, and writes an inaccurate equation.</p>	<p>The student writes one correct number sentence and thus cannot explain the similarities between two equations.</p> <p>OR</p> <p>The student writes two number sentences that are exactly the same as one another and explains thinking that does not reflect an understanding of the commutative property.</p>	<p>The student writes two correct and unique addition equations using 3, 6, and 9, but is unable to cite the commutative property in her own words to explain how the equations are same.</p>	<p>The student clearly</p> <ul style="list-style-type: none"> ▪ Writes two correct and unique addition equations that use 3, 6, and 9 ($9 = 6 + 3$, or $3 + 6 = 9$, or $9 = 3 + 6$, etc.). ▪ Demonstrates with pictures, numbers, and words how the number sentences are the same, somehow citing the commutative property in her own words.
<p>4</p> <p>1.3B 1.3C 1.3D 1.3E 1.3F 1.5D 1.5E 1.5F 1.5G</p>	<p>The student cannot explain any of the three scenarios clearly using equations, pictures, or words.</p> <p>The student cannot solve the <i>take apart with addend unknown</i> problem correctly.</p>	<p>The student explains one of the three scenarios clearly and thoroughly using equations, pictures, or words. The student solves the <i>take apart with addend unknown</i> problem incorrectly (something other than 3 carrots were in her lunch box).</p>	<p>The student explains two of the three scenarios clearly and thoroughly using equations, pictures, and/or words.</p> <p>The student solves the <i>take apart with addend unknown</i> problem correctly and determines that 3 carrots were in her lunch box.</p>	<p>The student clearly and thoroughly</p> <ul style="list-style-type: none"> ▪ Explains all three scenarios using equations, pictures, and/or words. ▪ Solves the <i>take apart with addend unknown</i> problem correctly and determines that 3 carrots were in her lunch box.

Name Maria Date

1. There were 5 boys at Jake's party. Some more came after basketball practice. Then, there were 9. How many boys came to Jake's party after basketball practice?
- a. Draw a picture to help you solve the problem.

- b. Draw a complete number bond that goes with this story.

- c. Write an addition sentence to match this story.

$$\underline{\quad 5 + 4 = 9 \quad}$$

2. Write the numbers that go in the blanks.
 - a. Color all of the partners to 10 blue.
 - b. Color all of the +1 facts yellow.
 - c. Color all of the +2 facts red.

$$3 + 7 = \underline{10}$$

$$\underline{5} = 1 + 4$$

$$3 + 2 = \underline{5}$$

$$\underline{9} = 7 + 2$$

$$5 + 1 = \underline{6}$$

$$\underline{9} = 8 + 1$$

$$9 + 1 = \underline{10}$$

$$\underline{8} = 2 + 6$$

$$6 + 4 = \underline{10}$$

3. Look at the party picture!

- a. Write at least two different addition sentences using 3, 6, and 9 that describe the party picture.

$$\underline{3 + 6 = 9}$$

$$\underline{6 + 3 = 9}$$

- b. How are these number sentences the same? Explain using pictures and numbers.

$$\begin{array}{r}
 3 + 6 = 9 \\
 \text{ooo} \quad \text{oooooo} \\
 \times \\
 6 + 3 = 9 \\
 \text{oooooo} \quad \text{ooo}
 \end{array}$$

4. Monica says when the unknown is 4, it makes this number sentence true:
 $5 + 3 = \underline{\quad} + 4$. Terry says she is wrong. He says 8 makes the number sentence true.

a. Who is correct? Explain your thinking using pictures, words, or numbers.

MONICA

They are the same so she's rite.

b. Monica says that 3 and 5 is equal to 5 and 3. Terry says she is wrong again. Explain who is correct, using pictures, numbers, or words.

MONICA

the same

c. Next, Monica tells Terry $8 = 8$. Terry says she is wrong one more time. Explain who is correct, using pictures, pictures, numbers, or words.

Its true!

d. Terry decided to share 8 carrot sticks with his friend Monica. Monica put 5 carrot sticks on her plate and some more in her lunch box. How many carrot sticks did Monica put in her lunch box?

3 carrot sticks
