

## Lesson 13

**Objective:** Fluently multiply multi-digit whole numbers using the standard algorithm to solve multi-step word problems.

### Suggested Lesson Structure

■ Fluency Practice	(10 minutes)
■ Concept Development	(40 minutes)
■ Student Debrief	(10 minutes)
<b>Total Time</b>	<b>(60 minutes)</b>

### Fluency Practice (10 minutes)

- Multiply and Divide by Multiples of Ten **5.2A** (4 minutes)
- Estimate Products by Rounding **5.3A, 5.3B, 5.4B** (6 minutes)

### Multiply and Divide by Multiples of Ten (4 minutes)

Materials: (T/S) Millions to thousandths place value chart (Lesson 5 Template) (S) Personal white board

Note: This review fluency activity encourages flexible thinking because of the inclusion of division.

T: (Project place value chart from millions to thousandths.) Write 45 tenths as a decimal.

S: (Write 4 in the ones column and 5 in the tenths column.)

T: Say the decimal.

S: Four and five tenths.

T: Multiply it by 100.

S: (Cross out 4.5 and write 450.)

Repeat the process and sequence for  $0.4 \times 100$ ,  $0.4 \div 100$ ,  $3.895 \times 1000$ , and  $5,472 \div 1000$ .

### Estimate Products by Rounding (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity's focus is estimation, which will be used during this lesson.

T: (Write  $412 \times 231 \approx \underline{\quad} \times \underline{\quad}$ .) Round both factors to the nearest hundred.

S:  $400 \times 200$ .

T: Write  $412 \times 231 \approx 400 \times 200$ . What is  $400 \times 200$ ?

S: 80,000.

Repeat the process and procedure for  $523 \times 298 \approx 500 \times 300$ ,  $684 \times 347$ , and  $908 \times 297$ .

### Concept Development (40 minutes)

Materials: (T/S) Problem Set

Note: This lesson omits the Application Problem component since the entire lesson is devoted to problem solving. Problems for this section are found in this lesson's Problem Set.

#### Problem 1

An office space in New York City measures 48 feet by 56 feet. If it sells for \$565 per square foot, what is the total cost of the office space?

T: We will work Problem 1 on your Problem Set together. (Project the problem on the board.) Let's read the word problem aloud.

S: (Read chorally.)

T: Now, let's re-read the problem sentence by sentence, and draw as we go.

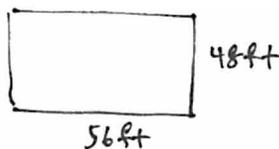

S: (Read the first sentence.)

T: What do you see? Can you draw something?

S: (Draw.)

T: Read the next sentence. (Give students time to read.) What is the important information, and how can we show that in our drawing?

S: The office space sells for \$565 for each square foot. We can draw a single square unit inside our rectangle to remind us. → We can write that 1 unit = \$565.

$$\begin{aligned} A &= l \times w \\ &= 56 \text{ ft} \times 48 \text{ ft} \\ &= 2,688 \text{ ft}^2 \end{aligned}$$

$$\begin{array}{r} 56 \\ \times 48 \\ \hline 448 \\ 2240 \\ \hline 2688 \end{array}$$

$$\begin{aligned} 1 \text{ unit} &= \$565 \\ 2688 \text{ units} &= 2688 \times \$565 \\ &= \$1,518,720 \end{aligned}$$

$$\begin{array}{r} 2688 \\ \times 565 \\ \hline 13440 \\ 161280 \\ + 1344000 \\ \hline 1,518,720 \end{array}$$

The selling price of the office space was \$1,518,720.

- T: How do we solve this problem? Turn and talk.
- S: We have to multiply. We have to find the total square feet of the office space and then multiply by \$565. → We have to first find the area of the office space and then multiply by \$565.
- T: What information are we given that would help us figure out the area?
- S: We can multiply the length times the width.
- S: (Solve to find 2,688 ft<sup>2</sup>.)
- T: Have we answered the question?
- S: No. We need to multiply the area by the cost of one square foot, \$565, to find the total cost.
- T: Solve and express your answer in a complete sentence.
- S: (Work.) The cost of the office space is \$1,518,720.

### Problem 2

Gemma and Leah are both jewelry makers. Gemma made 106 beaded necklaces. Leah made 39 more necklaces than Gemma.

- a. Each necklace they make has exactly 104 beads on it. How many beads did both girls use altogether while making their necklaces?
- b. At a recent craft fair, Gemma sold each of her necklaces for \$14. Leah sold each of her necklaces for \$10 more. Who made more money at the craft fair? How much more?

T: (Allow students to read the problem chorally, in pairs, or in silence.)

T: Can you draw something?

S: Yes.

T: What can you draw?

S: A strip for Gemma's necklaces and a second, longer bar for Leah's.

T: Go ahead and draw and label your strip diagrams. (Allow time for students to work.)

T: What is the question asking?

S: We have to find the total number of beads on all the necklaces.

T: What do we need to think about to solve this problem? What do you notice about it?

S: It is a multi-step problem. We need to know how many necklaces Leah made before we can find the total number of necklaces. Then, we need to find the number of beads.

T: Work together to complete the first steps by finding the total number of necklaces.

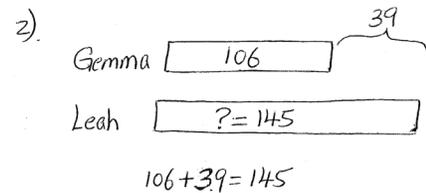

T: We haven't answered the question yet. Turn and talk to your partner about how we can finish solving Part (a).

S: We have to multiply to find the total beads for both girls. → Multiply Gemma's number of necklaces times 104 beads, multiply Leah's number of necklaces times 104, and then add them together. → Add Gemma and Leah's necklaces together, and then multiply by 104.

#### NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Guide students to select and practice using various models (e.g., strip diagram or area model) to represent the given information in each problem.

$$\begin{aligned} \text{a). } & (106 \times 104) + (145 \times 104) \\ & = 11,024 + 15,080 \\ & = 26,104 \end{aligned}$$

Both girls used 26,104 beads altogether.

$$\begin{aligned} \text{b). } & (\$24 \times 145) - (\$14 \times 106) \\ & = \$3480 - \$1484 \\ & = \$1996 \end{aligned}$$

Leah made more money.

Leah made \$1996 more than Gemma.

- T: Use an expression to show your strategy for solving.
- S:  $(106 \times 104) + (145 \times 104)$  or  $(106 + 145) \times 104$ .
- T: Solve the problem with your partner, and make a statement to answer the question.
- S: Gemma and Leah used 26,104 beads altogether.
- T: Let's read Part (b) together.
- S: (Read.)
- T: Who made more money? Without calculating, can we answer this question? Turn and talk.
- S: Leah made more necklaces than Gemma, and she charged more per necklace. Therefore, it makes sense that Leah made more money than Gemma.
- T: Find out how much more money Leah made.
- S: (Work.)
- S: Leah made \$1,996 more than Gemma.
- T: Complete Problems 3, 4, 5, and 6 of the Problem Set independently or in pairs.

### NOTES ON MULTIPLE MEANS OF ACTIONS AND EXPRESSION:

Vary the grouping size in the classroom. Smaller groups support English language learners to navigate the language of word problems and allow students to find full proficiency of the mathematics first, without the obstacles of vocabulary.

## Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

## Student Debrief (10 minutes)

**Lesson Objective:** Fluently multiply multi-digit whole numbers using the standard algorithm to solve multi-step word problems.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Name Ridley Date Jan. 9

Solve.

1. An office space in Dallas measures 48 feet by 56 feet. If it sells for \$565 per square foot, what is the total cost of the office space?

$$\begin{array}{r} 48 \text{ ft} \\ \times 56 \text{ ft} \\ \hline 288 \\ + 2700 \\ \hline 2688 \text{ ft}^2 \end{array}$$

$$\begin{array}{r} 2688 \\ \times 565 \\ \hline 13440 \\ 161280 \\ + 134400 \\ \hline 1,518,720 \end{array}$$

The office space costs \$1,518,720.

2. Gemma and Leah are both jewelry makers. Gemma made 106 beaded necklaces. Leah made 39 more necklaces than Gemma.

a. Each necklace they make has exactly 104 beads on it. How many beads did both girls use altogether while making their necklaces?

$$\begin{array}{r} 106 \\ \times 104 \\ \hline 424 \\ + 1060 \\ \hline 11060 \end{array}$$

$$\begin{array}{r} 145 \\ \times 104 \\ \hline 580 \\ + 1450 \\ \hline 1520 \end{array}$$

$$\begin{array}{r} 106 \\ \times 251 \\ \hline 251 \\ 5200 \\ + 26800 \\ \hline 26,104 \end{array}$$

Together they used 26,104 beads.

b. At a recent craft fair, Gemma sold each of her necklaces for \$14. Leah sold each of her necklaces for \$14 more. Who made more money at the craft fair? How much more?

$$\begin{array}{r} 106 \\ \times 14 \\ \hline 424 \\ + 1060 \\ \hline 1484 \end{array}$$

$$\begin{array}{r} 145 \\ \times 24 \\ \hline 580 \\ + 2900 \\ \hline 3480 \end{array}$$

$$\begin{array}{r} \$3480 \\ - 1484 \\ \hline \$1996 \end{array}$$

Leah made \$1,996 more than Gemma.

Any combination of the questions below may be used to lead the discussion.

- Share and explain to your partner the numerical expressions you wrote to help you solve Problems 3 and 5.
- Explain how Problems 3 and 5 could both be solved in more than one way.
- What type of problem are Problem 1 and Problem 5? How are these two problems different from the others? (Problems 1 and 5 are measurement problems.)

**Exit Ticket (3 minutes)**

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students’ understanding of the concepts that were presented in today’s lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

3. Peng bought 26 treadmills for her new fitness center at \$1,334 each. Then, she bought 19 stationary bikes for \$749 each. How much did she spend on her new equipment? Write an expression, and then solve.

$$(26 \times \$1334) + (19 \times \$749)$$

$\begin{array}{r} \$1334 \\ \times 26 \\ \hline 8004 \\ 26680 \\ \hline \$34,684 \end{array}$	$\begin{array}{r} \$749 \\ \times 19 \\ \hline 6741 \\ 7490 \\ \hline \$14,231 \end{array}$	$\begin{array}{r} \$34,684 \\ + 14,231 \\ \hline \$48,915 \end{array}$	Peng spent \$48,915.
---	---	--	-------------------------

4. A Rio Grande Valley farmer has 26 part-time employees. The farmer pays each employee \$410 per week. After paying his workers for one week, the farmer has \$162 left in his bank account. How much money did he have at first?

$\begin{array}{r} \text{Farmer's} \\ \text{Money} \\ \hline 26 \times 410 \\ \hline 10,660 \\ + 162 \\ \hline 10,822 \end{array}$	$\begin{array}{r} 410 \\ \times 26 \\ \hline 2460 \\ + 8200 \\ \hline 10,660 \end{array}$	$\begin{array}{r} 10,660 \\ + 162 \\ \hline 10,822 \end{array}$
---	---	---

5. Frances is sewing a border around 2 rectangular tablecloths that each measure 9 feet long by 6 feet wide. If it takes her 3 minutes to sew on 1 inch of border, how many minutes will it take her to complete her sewing project? Write an expression, and then solve.

$\begin{array}{l} 2 \times (9 + 6 + 9 + 6) \times 12 \times 3 = \\ 2 \times 30 \times 12 \times 3 = \\ 2 \times 360 \times 3 = \\ 720 \times 3 = 2,160 \end{array}$	It will take Francis 2,160 minutes to complete her project
---	--

6. Each grade level at Hooperville Schools has 298 students.

a. If there are 13 grade levels, how many students attend Hooperville Schools?

$\begin{array}{r} 298 \\ \times 13 \\ \hline 894 \\ + 2980 \\ \hline 3,874 \end{array}$	3,874 students attend Hooperville Schools.
---	---

b. A nearby district, Willington, is much larger. They have 12 times as many students. How many students attend schools in Willington?

$\begin{array}{r} 3,874 \\ \times 12 \\ \hline 7748 \\ + 38740 \\ \hline 46,488 \end{array}$	46,488 Students attend schools in Willington.
--	---

3. Bao saved \$179 a month. He saved \$145 less than Ada each month. How much would Ada save in three and a half years?
4. Mrs. Williams is knitting a blanket for her newborn granddaughter. The blanket is 2.25 meters long and 1.8 meters wide. What is the area of the blanket? Write the answer in centimeters.

5. Use the chart to solve.

### Soccer Field Dimensions

	FIFA Regulation (in yards)	New York State High Schools (in yards)
<b>Minimum Length</b>	110	100
<b>Maximum Length</b>	120	120
<b>Minimum Width</b>	70	55
<b>Maximum Width</b>	80	80

- a. Write an expression to find the difference in the maximum area and minimum area of a NYS high school soccer field. Then, evaluate your expression.
- b. Would a field with a width of 75 yards and an area of 7,500 square yards be within FIFA regulation? Why or why not?
- c. It costs \$26 to fertilize, water, mow, and maintain each square yard of a full size FIFA field (with maximum dimensions) before each game. How much will it cost to prepare the field for next week's match?
